[main (root-commit) c78de05] Initial commit
 1 file changed, 1 insertion(+)
   create mode 100644 file1.txt
[asp@R by % git log
commit c78de05535c3eb9196e103e1aacbf997e3d4766e (HEAD -> main)
Author: Zlan9 <archishmansingh805@gmail.com>
Date:   Fri Feb 13 10:43:52 2026 +0530

  Initial commit
[asp@R by % git status
On branch main
nothing to commit, working tree clean
```

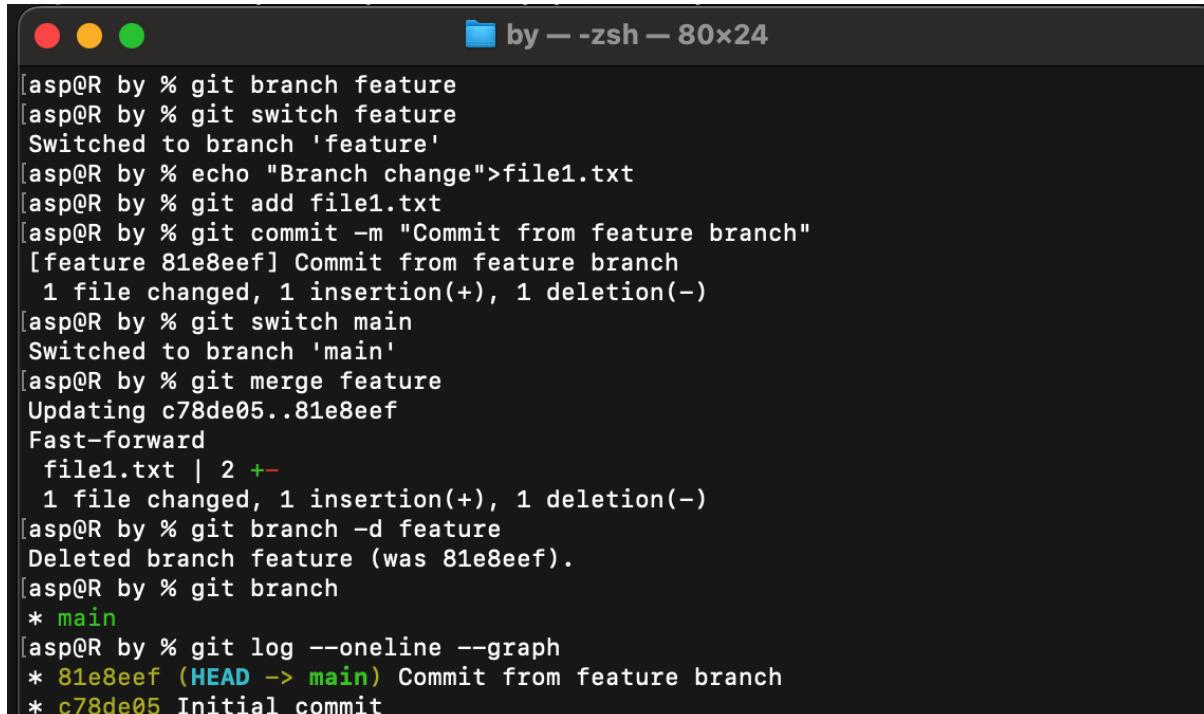

PART B:

Q. What a git branch represents internally?

A. A branch represents a movable pointer to a commit chain.

Q. Why git status is critical during development?

A. Git status is critical during development because it provides an immediate, real time snapshot of the working directory.

A screenshot of a terminal window titled "by — -zsh — 80x24". The window shows a sequence of git commands and their outputs. It starts with switching to a 'feature' branch, creating a file 'file1.txt', committing changes, switching back to 'main', merging 'feature' into 'main', and finally deleting the 'feature' branch. The terminal also shows the current state with 'main' as the active branch and a log of recent commits.

```
[asp@R by % git branch feature
[asp@R by % git switch feature
Switched to branch 'feature'
[asp@R by % echo "Branch change">>file1.txt
[asp@R by % git add file1.txt
[asp@R by % git commit -m "Commit from feature branch"
[feature 81e8eef] Commit from feature branch
 1 file changed, 1 insertion(+), 1 deletion(-)
[asp@R by % git switch main
Switched to branch 'main'
[asp@R by % git merge feature
Updating c78de05..81e8eef
Fast-forward
  file1.txt | 2 ++
  1 file changed, 1 insertion(+), 1 deletion(-)
[asp@R by % git branch -d feature
Deleted branch feature (was 81e8eef).
[asp@R by % git branch
* main
[asp@R by % git log --oneline --graph
* 81e8eef (HEAD -> main) Commit from feature branch
* c78de05 Initial commit
```

PART C:

```
by — -zsh — 80x24
[asp@R by % git checkout -b fast-branch
Switched to a new branch 'fast-branch'
[asp@R by % echo "fast commit">>fast.txt
[asp@R by % git add fast.txt
[asp@R by % git commit -m "Commit from fast"
[fast-branch fa6d551] Commit from fast
 1 file changed, 1 insertion(+)
  create mode 100644 fast.txt
[asp@R by % git checkout main
Switched to branch 'main'
[asp@R by % git merge fast-branch
Updating 81e8eef..fa6d551
Fast-forward
  fast.txt | 1 +
  1 file changed, 1 insertion(+)
  create mode 100644 fast.txt

by — -zsh — 80x24
[branch2 669d5e8] Commit by branch2
 1 file changed, 1 insertion(+)
  create mode 100644 file2.txt
[asp@R by % git checkout main
Switched to branch 'main'
[asp@R by % git merge branch1
Updating fa6d551..1be0540
Fast-forward
  file01.txt | 1 +
  1 file changed, 1 insertion(+)
  create mode 100644 file01.txt
[asp@R by % git merge bracnh2
merge: bracnh2 - not something we can merge
[asp@R by % git merge branch2
error: there was a problem with the editor 'vi'
Not committing merge; use 'git commit' to complete the merge.
[asp@R by % git checkout -b conflict-branch
Switched to a new branch 'conflict-branch'
[asp@R by % echo "Conflict change from branch">>file.txt
[asp@R by % git add file.txt
[asp@R by % git commit -m "Main conflicting commit"
[conflict-branch aabd184] Main conflicting commit
  2 files changed, 2 insertions(+)
  create mode 100644 file.txt
```

```
[asp@R by % git merge conflict-branch
Already up to date.
[asp@R by % git checkout main
Switched to branch 'main'
[asp@R by % git merge conflict-branch
Updating 1be0540..aabbd184
Fast-forward
 file.txt | 1 +
 file2.txt | 1 +
 2 files changed, 2 insertions(+)
 create mode 100644 file.txt
 create mode 100644 file2.txt
[asp@R by % git add file.txt
[asp@R by % git commit -m "Resolved merge conflict"
On branch main
nothing to commit, working tree clean
[asp@R by % git commit -m "Resolved merge conflict"
On branch main
nothing to commit, working tree clean
[asp@R by % git add file.txt
[asp@R by % git status
On branch main
nothing to commit, working tree clean
[asp@R by % ls
```

PART D:

```
[asp@R by % git stash
Saved working directory and index state WIP on main: aabd184 Main conflicting co
mmit
[asp@R by % git status
On branch main
nothing to commit, working tree clean
[asp@R by % git stash list
stash@{0}: WIP on main: aabd184 Main conflicting commit
[asp@R by % git stash apply
On branch main
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   file.txt

no changes added to commit (use "git add" and/or "git commit -a")
[asp@R by % git stash pop
error: Your local changes to the following files would be overwritten by merge:
      file.txt
Please commit your changes or stash them before you merge.
Aborting
On branch main
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
```

```
(use "git restore <file>..." to discard changes in working directory)
  modified:   file.txt

no changes added to commit (use "git add" and/or "git commit -a")
The stash entry is kept in case you need it again.
[asp@R by % git stash -u
Saved working directory and index state WIP on main: aabd184 Main conflicting co
mmit
```

PART E:

1.

2. Git diff reveals:

- a. Line by line code changes
- b. Which lines were added
- c. Which lines were removed
- d. Which lines were modified

e. Differences between working directory and staging area.

3. GitHub is a cloud based repository hosting platform.

It stores remote repositories.

Enables team collaboration.

Allows pull requests

Provides code review system.

Manages version history.

4. In a software company:

- Developer A pushes code to GitHub.
- Developer B pulls the latest changes.
- Code is reviewed using pull requests.
- Manager approves merge into main branch.

This ensures:

- Safe collaboration
- Code tracking
- Version control
- Backup and recovery
